### **BALANCE SYSTEM BS-900**

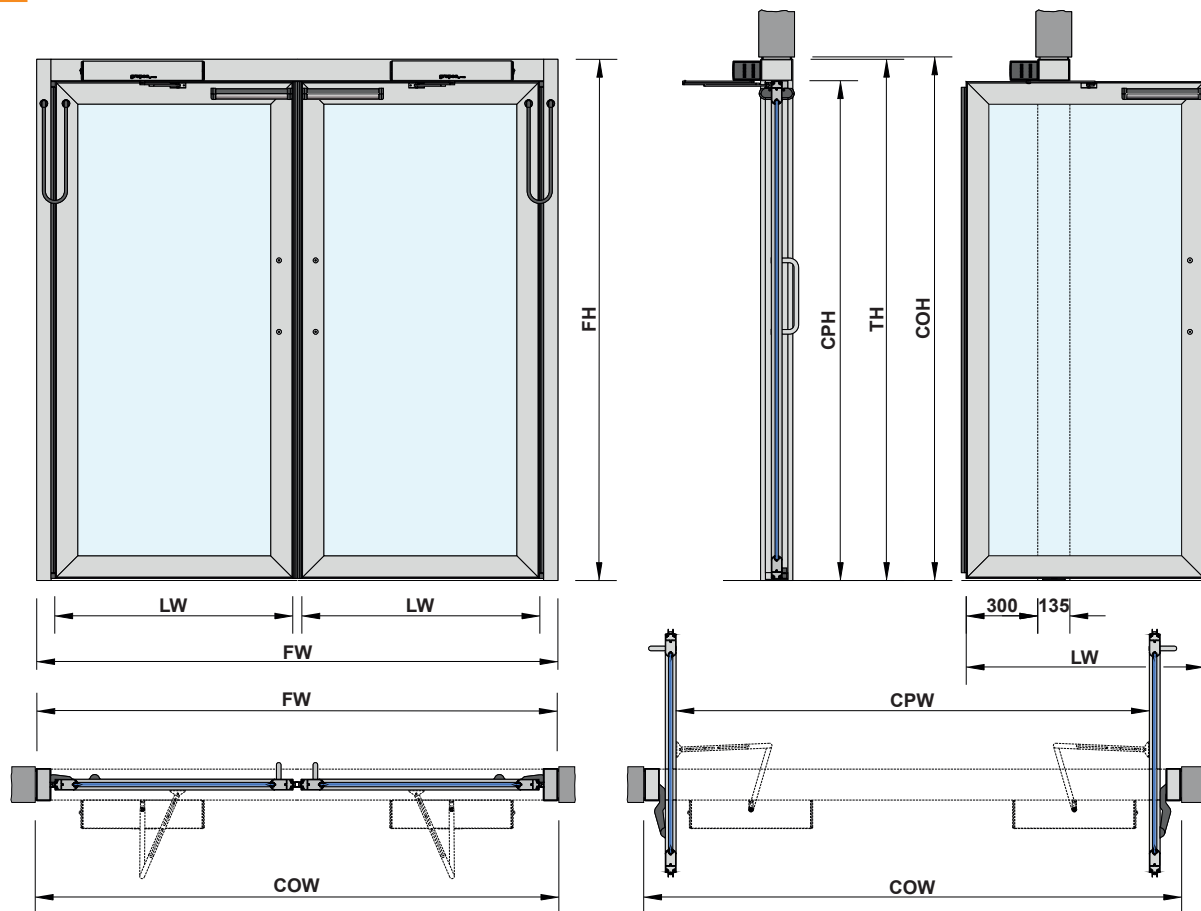

The **Balanced Doors of the range Balance System** are an option for intense traffic, interior areas or exterior entrances with wind currents. Our AGB operator for balance doors holds the door under tension to ensure easy and elegant opening and secure closing for users.

In accordance with the strictest European safety regulations (EN 16005), the BS-900 model of balanced doors adapts to narrow entrances or corridors that require the maximum width of passage. It is made of aluminum, with multiple finishes to be customized to the aesthetics of the building.

In addition, they are prepared for power failures, as they optionally include a backup battery that guarantees operation even if they may temporarily lack power.

- Perfect for narrow corridors or entrances that need a wide passage width.
- Safety, reliability and low maintenance cost.
- Reinforced protection thanks to safety sensors and anti-pinch protection between door leaves.

## BALANCED DOOR BS-900
